Rising hinge  
systems

Sliding  
driveway gates

Have you ever owned a gate which has dropped, sagged, warped, twisted and generally driven you mad! **We now have a solution.**

Town and Around Fence and Gate Limited have produced a new type of gate that completely eliminates warping, twisting and sagging.

By manufacturing a timber gate with a welded galvanised steel frame we can eliminate all the issues experienced with timber gates.

The frame is galvanized steel which can also be powdercoated in a colour of your choice. As shown, in most cases the steel frame is visible from the inside only and we are able to clad almost anything to it:

- Pine
- Cedar
- Tongue and Groove (TG&V).

## Pedestrians
