MOTORWAY

SECURITY 18

SECURITY 21

Hurricane Security Panels are designed for those locations where visual appeal and integrity of access share equal importance. The strong rigid panels integrate well into urban and rural settings, and the simple but effective method of erection allows ample flexibility in locating your fence to suit requirements and surroundings. All Hurricane Security Panels feature an anti scaling gap of vertical rods without horizontal hand or foot holds to present the maximum deterrent to climbers and although galvanised pipe is commonly used as the support post, the panels are just as readily attached to wooden posts, brick pillars, concrete or any building surface.

Extensive use has been made of Hurricane Motorway Panels to isolate motorways and high flow intersections from pedestrian access. The robust construction and hot dip galvanised finish ensure many years of faultless service, however, in the event of Hurricane Motorway Panels being damaged, simplicity of panel replacement ensures restoration of security with a minimum of delay.

	MOTORWAY PANEL	SECURITY 18 PANEL	SECURITY 21 PANEL
Overall Length	2410mm	2410mm	2410mm
Overall Height	1300mm	1825mm	2130mm
